---

Hi, thank you for your consideration. Glyphosate is a synthetic glycine therefore replacing that important amino acid in our (and mamal, ie cow/pig) collagen. This is a huge factor in our explosion of auto immune disease since it turns on the auto immune function. It causes my sons autism and my daughters celiac symptoms. They do not have the diseases if they r glyphosate free. Our organic food has more poison than conventional european food. Please help our country survive this systemic poisoning of our systems. Thank you again and may YHWH bless you..

-Jaclyn Pelchat, resident of Florida but buys organic food from California-
